What You Need

An Ava Byte Smart Garden + Plant Pod Pack

A mobile phone or tablet with the latest version of the Ava Smart Garden app

2.8L or 0.75 Gallons of water (room temperature and filtered)

A secure Wi-Fi connection

Please note that the Ava Byte works with a 2.4GHz network (a 5G only and/or WPA-2 Enterprise network won't work).

Get Started in 4 Easy Steps

1 Plug in your Ava Byte Smart Garden.

The Byte button LED indicator will flash white for 25 seconds and the power on sequence will be completed with a light show.

2 Check Byte button LED indicator:

If it is flashing **blue**, proceed to step 3.

If it is flashing **orange**, connect your pump before you continue

Need help connecting the pump? Scan the above to access a tutorial

3 On your phone or tablet, download and open the Ava Smart Garden app and create your account.

Scan this QR to download the app

4 Connect your Smart Garden to your Wi-Fi network by following the in-app instructions. You can enter your Wi-Fi manually if it does not appear in the auto-generated list.

Please note that the Ava Byte works with a 2.4GHz network (a 5G only and/or WPA-2 Enterprise network won't work).

Add your first pod pack

1 Tap the + icon on the home screen in the app.

2 Click 'pod pack' if using pre-seeded pods or 'GYO' if using a Grow Your Own pod pack.

3 Remove growing trays

4 Add 2.8L or 0.75 Gallons of water to your reservoir—we recommend referencing the 'Max Fill Line' found on either side of the pump inside the reservoir.

5 Place growing trays back on the Byte.

6 Assemble your pods - Remove the Ava stickers on your pods and place your pods into the pod holders. Place the green labeled stickers on the plastic disc and place this on top of your pods.

7 Insert your pods into the Ava Byte and place a germination dome on each pod.

8 Scan the QR code on the bottom of your pod pack sleeve and set the start time for your LED lighting schedule.

Please note that your Ava Byte will automatically calculate when your lights will turn off. If you select a start time that has already passed, the lights will come on at your selected start time the following day.

The pump may make a loud noise upon running for the first time. The sound should stop after a minute, but if not, prime your pump by pouring a small amount of water slowly into the pump's water spout.

Let's get growing!

! QUICK TIP: Not sure when to remove the germination domes? Use the guide below.

Too Early

Wait a little bit more until you see a seedling.

Too Late

If your seedling lifts up the germination dome, remove it immediately.

Perfect!

If your seedling barely touches the germination dome, it's time to remove it!

A note from our founders

Welcome, we're so excited for you to get growing with the AVA Family!

We're Chase and Val, co-founders of AVA Technologies. As two environmentally-conscious foodies (and one ex-chef), we're obsessed with farm-to-table eating. Nothing beats the taste, freshness, and sustainability of homegrown herbs and veggies. Yet, living in an expensive city meant that we didn't have the space or sunlight to grow any of our own food!

After facing our own issues failing to grow potted plants, we realized there was a huge opportunity for smarter gardening products to support people like us—focused on living healthy and sustainable lives. It was at this moment that AVA (automated vertical agriculture) was born. Today, we're proud to be a part of a diverse team on a mission to help millions of people like you to grow.

Your journey to growth starts here.

LET'S GROW,

VALERIE SONG & CHASE ANDO, CO-FOUNDERS
